 - Local Government Committee, **Chairperson TBD**
 - PEPC, **Coordinator TBD**
 - Citizens Advisory Council, **Kevin McDonald**
 - Water Quality Monitoring Collaborative, **Joyce Novak**
 - Technical Advisory Council, **Matt Sclafani**
 - PEP Program Office Update
- Bipartisan Infrastructure Law (BIL) Funded Project Updates
- PEP Active Project Updates
- PEP Outreach Updates

12:15 Public Portion / Additional Comments

Thank you!

2024 Policy Committee meetings:

- October 30, 2024 Joint Policy & Management Meeting

Meeting Summary

The meeting covered a wide range of topics related to the Peconic Estuary Partnership (PEP) and its initiatives. The Suffolk County FY24 work plan and budget are presented, allocating funds for water quality monitoring, submerged aquatic vegetation monitoring, and the National Atmospheric Deposition Program. The Stony Brook University work plan and budget are discussed in detail, including personnel costs, outreach efforts, water quality projects, climate resiliency initiatives, and funding allocations from various sources like EPA, New York State, and local governments. Updates are provided on ongoing projects such as microplastics research, wetland restorations, culvert upgrades, and shoreline adaptation

approved 10/30/24

efforts. The Bipartisan Infrastructure Law (BIL) funding and associated projects are highlighted, including stormwater management, wetland restorations, water access improvements, and support for innovative wastewater treatment systems. Progress on aquatic connectivity and salt marsh restoration goals is also mentioned. The meeting concludes with a brief discussion on the (PEPCC chairperson position and the Suffolk County Soil & Water Conservation District.

The meeting begins with roll call, confirming the attendance of voting members, representatives from various agencies, and online participants. The minutes from the previous meeting on October 11, 2023, are approved, and the BIL Year Three work plan is formally approved.

The Suffolk County portion of the FY24 work plan is presented, for Suffolk County Department of Health for water quality monitoring, for submerged aquatic vegetation annual monitoring (an increase from previous years), and for the National Atmospheric Deposition Program. The work plan is approved by the Policy Committee.

The Stony Brook University work plan and budget are discussed in detail, covering personnel costs, travel expenses, website maintenance, the Geospatial Center tracking system, the Homeowner Rewards program, staff training, and communication services. The budget also includes funding for water quality projects, outreach efforts, climate resiliency initiatives (shoreline adaptation work and a climate workshop), and support for various partners and programs. The total budget includes EPA, New York State, and local government funds.

Updates are provided on the Program Office, including new staff hires and positions being filled. Committee updates are given, covering the Technical Advisory Committee's (TAC) focus on climate change-related issues, the Citizens Advisory Committee's (CAC) education efforts in Albany, and the Local Government Committee's discussions on scaling up the septic improvement program. Ongoing projects and initiatives are also mentioned, such as microplastics research, wetland restorations, culvert upgrades, and shoreline adaptation efforts.

The meeting highlights the additional funding received through the Bipartisan Infrastructure Law (BIL) and the associated projects being undertaken. These include stormwater management projects (Meetinghouse Creek, Havens Beach), wetland restorations (Riverside Wetlands), water access improvements (Broad Cove), discharge coordination (Goose Creek), and support for innovative wastewater treatment systems (IA Support). The 'Changes' project, focused on utilizing combinations of Kelp, oysters, and seagrass to mitigate climate change impacts, is also discussed.

approved 10/30/24

The meeting notes the progress made towards the Comprehensive Conservation and Management Plan (CCMP) goals for aquatic connectivity and salt marsh restoration. The aquatic connectivity goal of 242 acres in 10 years has already achieved 203 acres in 5 years, with the opening of several barriers like Grangebelle and Edwards Avenue. Additionally, 105 acres of salt marsh restoration are either in planning or implementation stages for 2023 and 2024, out of the 10-year goal of 250 acres.

The meeting briefly discusses the (PEPC) chairperson position, with the Suffolk County Soil and Water Conservation District expressing intent to partner with the PEPC and potentially take on the coordinator leadership role through an updated inter-municipal agreement with more details to come.

Member Attendance:

PEP Policy Committee members:

Chair: Jennifer Juengst (Suffolk County Executive Office)

~~Cathy Haas~~, Regional Director (NYS DEC, Region 1)
